

EACH ROLE GETS ITS OWN ASSISTANT

— WITH THE BUTTONS IT NEEDS, NOT A BLANK BOX.

Floor staff don't type questions — they **tap** them. Every role's chat opens with a tray of context-aware action buttons that fire pre-engineered prompts to the right agent. The user never sees the prompt; they see the answer. Typing is still available for the curious — but the demo path is buttons end-to-end.

01 COVERAGE MATRIX · 12 ROLES

Every role has its own action set. Buttons pre-fire prompts; AI replies; chips suggest next taps.

ROLE	PERSON	PRIMARY USE	ACTIONS	DEFAULT ROUTE
Authorised Representative	Ilse Venter	Morning brief · sign-off freeze · risk view	8	Concierge
Deputy AR	Coenie Venter	DAR sign queue · drift triage · escalations	6	Concierge
Responsible Pharmacist	Berne Swart	Stale section drafting · RP sign · S22C log	7	Composer
QA Lead	Keke	Deviations · CAPAs · COA review	6	Tickets
Facility Manager	Renae Purdon	BayGrid · greenhouse status · maintenance	6	Ops
Head of Cultivation	Lourens Eksteen	Plant lifecycle · IPM · harvest planning	6	Ops
Processing & QA Manager	Jeanette Ferreira	Trim · dry · cure · packaging batches	5	Tickets
Trimmer / Operator	Trimmer (1 of 25)	Today's job card · log work · raise issue	4	Tickets
Security	Sipho	Access events · perimeter · incident log	5	Ops
Admin & HR	Loraine	Onboarding · training matrix · leave · all admin	5	Ops
IT Manager	Calvin Green	Printers · network · computers (no platform admin)	5	Ops
SAHPRA Inspector	(viewer)	Read-only · sign-off chain · audit replay	4	SMF Q&A

Convention: primary action buttons are gold; destructive / sign-off actions are red-edged; secondary tools are dark. Every reply ends with 2–3 follow-up chips so the user can keep tapping without typing.

For the engineering room — what shipping the action tray actually requires.

CONCERN	APPROACH
Action button = pre-engineered prompt	Each button stores the full prompt server-side keyed by <code>actionId</code> . Frontend sends only the <code>actionId</code> + role context. No prompt injection surface.
Per-role action sets	Stored in <code>role_actions</code> table, joined to user role on chat-open. Owner-tier users see merged sets when ghost-acting as another role.
Follow-up chips	Returned by the agent in a structured <code>followups</code> : <code>[{label, actionId}]</code> field. Fallback to free-text if model omits.
Tap → action confirmation	Destructive actions (RP sign, AR freeze, end shift) require a second confirm tap. Non-destructive fire immediately.
Typing still allowed	The text input remains; buttons are the demo path, typing is the curious path. Both go through Maestro.
Telemetry	Every tap logged with <code>actionId</code> · <code>userId</code> · <code>realActorId</code> · <code>timestamp</code> in <code>AuditLog</code> . Enables "which buttons get used by which roles" reporting.
