SOP No:	3-CUL-010	Effective Date:	2020-06-15
Revision No:	2	Supersedes:	1
Revise By:	2022-05-15		

LIST OF ABBREVIATIONS

GAP	Good Agriculture Practice
GSP	Good Storage Practice
AR	Authorised Representative
SOP	Standard Operating Procedure

1. OBJECTIVE:

To develop and implement a facility with trained personnel to ensure all trimming operations will meet requirements and standards, and that no operation will be performed without adherence to guidelines as set out by Good Agricultural Practices

2. SCOPE:

This SOP explains the operations of trimming procedures for a medical cannabis plant.

3. RESPONSIBILITY:

AR	Authorised Representative
FM	Facility Manager
TL	Trimming Lead
HG	Head Grower

4. POLICY:

ILCO Farming will apply Good agricultural practices for the trimming of medicinal cannabis, as determined by the Department of Agriculture, Forestry and Fisheries (DAFF) for plants intended for human consumption, and Act 101 of 1965 to ensure all processes involved with the plant process is adhered to. Dry Trimming medicinal cannabis involves removal of all leaves, leaving just the buds, to hang and dry.

5. PROCEDURE:

5.1 Trim the dried medicinal plant material to remove all stems and leaves.

5.2 Clean and sanitise the trimming equipment:

- Pruning scissors
- Stainless steel work benches
- Vinyl gloves
- Rubbing alcohol
- Trimming machine

5.3 Assign adequate staff members to trim each batch.

5.4 Ensure that all work surfaces and tools are clean and sanitized with the specified detergent and sanitisation chemicals.

5.5 Only one batch of product will be taken into the trimming and processing room at a time.

5.6 Place the product on the medical grade steel tables.

5.7 Cut the stem approximately 1cm below the flower head.

5.8 Remove individual flowers from the stem.

5.9 Placing the stems in the stem storage bucket, weigh and place all trimmed waste material into a labelled container and remove to destruction area.

5.10 Place the flowers in a labelled container, weigh and place the container in the weighing and packing room.

5.11 Flowers are packed as per SOP: 3-INV-002 Procedure for product packaging.

- 5.3** Turn on the tank power supply to engage the circulation pump, aeration pump, and pH/ppm/temp monitors/meter.
- 5.4** Allow pump to run for at least 2 minutes to avoid pipes and filters clogging up.
- 5.5** Add the nutrients to the tank according to levels determined by the Head Grower and as to what stage the plants are growing.
- 5.6** Head grower will keep a record of nutrients added daily, weekly, and monthly.
- 5.7** Allow tank to mix for a minimum of 10 minutes, but not more than 20 minutes.
- 5.8** Check monitor/meter display for pH and PPM/ec levels.
- 5.9** Add auxiliary additives at levels set on head growers record.
- 5.10** Implement the proposed Nutrients as per Head Growers instruction.
- 5.11** Buffer pH levels using the pH "up" or "down" concentrates as indicated by the manufacturer on the container. Set point of pH to be gotten from the SOP.
- 5.12** Allow for 5 minutes but not more than 60 minutes for pH to stabilize.
- 5.13** Open the valve on the respective rooms tank and the valve above the pump to the respective area.
- 5.14** Turn on distribution pump to pressurize the watering system.
- 5.15** Set timer to automatically start feeding the plants at a certain time and hour as well as a consistent period.

LIST OF ABBREVIATIONS

GAP	Good Agriculture Practice
GSP	Good Storage Practice
AR	Authorised Representative
SOP	Standard Operating Procedure
SAHPRA	South African Health Products Authority

1. OBJECTIVE:

The objective of ILCO Farming (Pty) Ltd's inventory policies and procedures are:

- Ensuring product integrity for customers
- Preventing internal or external product diversion
- Complying with local jurisdiction and SAHPRA regulations
- Tracking key statistics related to our customers, product's, and business

2. SCOPE:

This SOP explains the process to be followed for inventory control on site.

3. RESPONSIBILITY:

AR	Authorised Representative
QAM	Quality Assurance Manager
FM	Facility Manager

4. POLICY:

The tracking and control of inventory is essential to all aspects of our cannabis operations, from keeping our products and facility secure to fulfilling our compassionate mission. While preventing opportunities for diversion, we seek to provide a steady supply of high-quality medicinal cannabis to meet the needs of medicinal patients. The goal of inventory control is to create a wholly transparent process of production and distribution so that at any time the condition and quantity of every product, regardless of its production stage, is documented. This will allow us to maintain exceptional quality while avoiding over- or underproduction, and it allow us to prevent or promptly recognize any misallocation or theft.

STANDARD OPERATING PROCEDURE

PROCEDURE FOR INVENTORY CONTROL v3

Page 2 of 9

SOP No:	3-INV-001	Effective Date:	2020-07-03
Revision No:	3	Supersedes:	2
Revise By:	2022-07-03		

There are four components to ILCO Farming comprehensive inventory control system:

- well-trained and well-supervised staff,
- state-of-the-art electronic inventory tracking,
- information security; and
- rigorous operational protocols of management, oversight, and accountability.

Relevant to inventory control is of course the overall security of our facility and operations. The security systems for our facility and operations are included in our Security Plan. We will not only prepare cannabis that is not under direct supervision but will ensure that cannabis products will always be secured in safes, cages or vaults with restricted access. Consequently, cannabis is never accessible unless there is a staff person who is also immediately responsible for its security. This ensures that there are no security gaps between the components of our inventory control system.

5. PROCEDURE:

5.1 Roles of the Facility Manager:

- 5.1.1 This person is responsible for inventory tracking and control. The FM will have operational oversight into the system to ensure the Inventory Control system is implemented and operates as intended.
- 5.1.2 The FM ensures that the electronic tracking system is operating properly, that daily opening and closing inventories are performed as required, and that manual inventory results tally with electronic records.
- 5.1.3 The FM performs a full audit of the inventory and inventory records at least once every 90 days and when discrepancies are detected, they are documented and investigated together with the AR.

5.2 Operational Staff:

- 5.2.1 All staff involved in the handling of medicinal cannabis will be trained in the proper inventory control techniques that go with their jobs, and in the use of our electronic tracking system, applicable to their job function.
- 5.2.2 The IT manager will be responsible for the security and functioning of the data management system

SOP No:	3-INV-001	Effective Date:	2020-07-03
Revision No:	3	Supersedes:	2
Revise By:	2022-07-03		

- 5.2.3 The security manager is responsible for the initiation of security reviews when inventories do not agree.

5.3 Software Systems:

- 5.3.1 The electronic tracking software such as Biotrack THC, GrowerIQ or Cannabis 365 will be installed at the Site.
- 5.3.2 Every medicinal cannabis product in our facility will be tagged with a unique (sequential) identification number. This number is visibly displayed and encoded in an electronically readable format (a bar code).
- 5.3.3 The inventory control tags are created using a thermal bar code printing technology.
- 5.3.4 All information and history pertaining to a plant is associated with this number, and every package containing cannabis from this plant and every processed product made from this plant bears a similar, unique control number that incorporates or cross-references the number of the plant.
- 5.3.5 The following information is captured and available for traceability purposes across the life cycle of each plant:
- strain, batch, tray number, and birth date of any plant,
 - the cloning mother a cutting was taken from
 - details of its cultivation history (if, for example, there were any problems and how they were remedied)
 - the results of all the quality control tests
 - its genetic history and medicinal variety
 - the amount of dry yield that can be expected from the plant
 - the amount harvested from the plant
 - how and why it was disposed of, and on what date
- 5.3.6 The Inventory tracking system provides at any time an accurate snapshot of current production conditions: how many plants are being cultivated and the stage of each plant in the supply chain process.
- 5.3.7 This system is used to provide the following information:
- The identity and quality of strains available or in process
 - creating timely alerts on low inventory
 - Creating timely warnings of possible overproduction
 - recalled and returned cannabis
 - cannabis designated for disposal

Page 4 of 9

SOP No:	3-INV-001	Effective Date:	2020-07-03
Revision No:	3	Supersedes:	2
Revise By:	2022-07-03		

- Cannabis already disposed of
- any plant that was produced at our facility
- any plant currently under cultivation
- the future production forecast
- the products in transit
- current inventory levels at our cultivation facility
- the amount of medicinal cannabis sold

- 5.3.8 Limited access to this network is implemented by using unique user passwords and by restricting IP addresses and MAC addresses to specific computers.
- 5.3.9 To use third-party email, web and data servers will be avoided
- 5.3.10 All data and information are secured and encrypted and backed up automatically every night to a private server on site, and also to secure, off-site server location, thus safeguarding our data against disaster. For data backup we are using an external backup on site and encrypted FTP for transfer to secure off-site storage.

5.4 General Inventory Controls:

- 5.4.1 Appropriate managers will be responsible for performing inventory, upon delivery, of all purchased non-cannabis materials (growth supplies, cultivation facility supplies, and raw materials). They will provide their written inventory results to our accountants for reconciliation with purchase orders.
- 5.4.2 Inventory of medicinal cannabis is recorded in a precise manner to 1/100th of a gram. Precision scales that are calibrated daily. All weights must fall within specific tolerance ranges to ensure there is no inventory shrinkage:
- The inventory tracking system creates an alert if weights fall outside of specified tolerance ranges
- 5.4.3 Inventory of cannabis will cover seedlings, mature plants, packaged cannabis, food products, drying and curing cannabis, and items in quarantine or awaiting disposal.
- 5.4.4 Any discrepancies between actual and recorded inventory will trigger an audit of inventory holdings and inventory records by the FM sufficient to identify the problem. Confirmed inventory shrinkage will trigger a review of security and surveillance data and the implementation of appropriate corrective measures. Law enforcement authorities will be notified immediately if the FM ascertains that there has indeed been loss, theft, improper diversion, or any other criminal activity.

STANDARD OPERATING PROCEDURE

PROCEDURE FOR INVENTORY CONTROL v3

Page 5 of 9

SOP No:	3-INV-001	Effective Date:	2020-07-03
Revision No:	3	Supersedes:	2
Revise By:	2022-07-03		

- 5.4.5 The records of all inventories show
- the time and date of the inventory
 - the inventory results
 - the names and registry identification numbers of the employees performing the inventory
 - their signatures
- 5.4.6 The electronic record will be maintained in our database for at least five (5) years.
- 5.4.7 A hard-copy printout of the inventory results will be signed by the employee(s) who have performed the inventory and kept on file (as a paper hard-copy or in scanned facsimile) also for at least five (5) years.

5.5 Daily Operations process:

- 5.5.1 Daily operations are defined by critical transitions: opening for business, harvesting, or packaging plants, acquiring, selling, delivering, or disposing of inventory, closing for the day.
- 5.5.2 The inventory tracking system will be designed to enable us to document inventory status/flow for each critical transition event:
- Opening inventory
 - Acquisitions
 - Harvest
 - Sale
 - Disbursements
 - Deliveries
 - Returns
 - Disposals
 - Closing inventory
- 5.5.3 At each step, those involved in handling the inventory must identify themselves to the system with a secure authentication procedure using a unique employee password or electronically readable ID.
- 5.5.4 The type of transition event will be indicated, and the inventory is identified by electronic reading of its tracking number. The system automatically aggregates inventory by the types of transitions through which it passes (all sales, all deliveries, etc.) and by time of day (e.g., the disposition of any and every product at 3:00pm: being harvested, in transit, sold, etc.).

4. The containment of the product is the most fundamental function of packaging for medicinal products.
5. The design of high-quality packaging must consider both the needs of the product and of the manufacturing and distribution system.
6. This requires the packaging:
 - a) not to leak, nor allow diffusion and permeation of the product;
 - b) to be strong enough to hold the contents when subjected to normal handling;
 - c) not to be altered by the ingredients of the formulation in its final dosage form.
7. Medical Cannabis item for ultimate sale to the off taker must:
 - a) Be sealed, hard or soft-bodied receptacle in which a Medical cannabis item is placed prior to being exported.
 - b) If ILCO Farming receives a Medical Cannabis item that is not packaged or labeled in accordance to standard procedures.
 - c) ILCO Farming will notify the Commission. Refer to **SOP-2-LEG-004-RECALL PROCEDURE**.

SOP No:	3-INV-003	Effective Date:	2019-08-01
Revision No:	1	Supersedes:	N/A
Revise By:	2021-08-01		

- a. Purchase invoices and supporting documents for items and services purchased for use in the production, processing, research, testing and sale of Medical Cannabis items that include from whom the items were purchased and the date of purchase.
- b. Bank statements for any accounts relating to the licensed business.
- c. Accounting and tax records related to the licensed business.
- d. Documentation of all financial transactions related to the licensed business.
 - i. Contracts
 - ii. Agreements for services performed
 - iii. Agreements for services received
 - iv. All employee records to include training.

Record Keeping Transparency

will adhere to the following standards:

1. All records related to commercial Medical Cannabis activity shall be maintained for a minimum of five years.
2. Will allow licensing authorities to examine the records of a licensee and inspect the premises of a licensee as the licensing authority, or a government or local agency, deems necessary to perform its duties under this division. All inspections and examinations of records shall be conducted during standard business hours of the licensed facility or at any other reasonable time. Licensees shall provide and deliver records to the licensing authority upon request.
3. Shall keep records identified by the licensing authorities on the premises of the location licensed. The licensing authorities may make any examination of the records of any licensee. Licensees shall also provide and deliver copies of documents to the licensing authority upon request.
4. Understands that if a licensee, or its agent or employee, that refuses, impedes, obstructs, or interferes with an inspection of the premises or records of the licensee pursuant to this section, has engaged in a violation of SAHPRA.
5. Understands that they are responsible for compliance to these policies. If an agent or employee of a licensee, fails to maintain or provide the records required pursuant to this section, the licensee shall be subject to a citation and fine.

PROCEDURE FOR CRITICAL PROCESS CONTROLS

Page 1 of 5

SOP No:	3-INV-004	Effective Date:	2019-08-01
Revision No:	1	Supersedes:	N/A
Revise By:	2021-08-01		

LIST OF ABBREVIATIONS

AR	Authorised Representative
QA	Quality Assurance
SAHPRA	South African Health Products and Regulatory Authority

1. OBJECTIVE:

To ensure critical process controls are in place for manufacturing activities, packaging activities, labelling activities and storage activities.

2. SCOPE:

All processes are controlled by the AR or FM. All actions taken pursuant to the process are accurately documented on the Master Production Document and Batch Production Record and all requirements as set out by SAPHRA, GSP that must be adhered to.

3. RESPONSIBILITY:

Authorised Representative (AR).
Quality Assurance (QA).
Facility Manager (FM).

4. POLICY:

All critical process control requirements will be ensured by the AR which includes the receipt of the raw packaging materials, growing, drying labelling and storage.

5. PROCEDURE:

1. Cultivating

- 1.1 The cultivation climate must be maintained from production to harvest.
- 1.2 All employees must be aware of air currents and be assigned to specific tasks to eliminate cross-contamination.
- 1.3 All designated and trained staff must ensure the equipment is clean prior to use and ensure they wear the appropriate clothing when handling Medical Cannabis to reduce chances of contamination.
- 1.4 Management must ensure that employees who have infectious diseases do not work and ensure that all workflow areas are clean to prevent contamination.

2. Harvesting

- 2.1 All products will be properly labeled for traceability.
- 2.2 The plants are cut with the stems still attached, the large fan leaves are removed and hung in the drying area until stems snap and the moisture content reaches around 14%.
- 2.3 The climate must be maintained and allow for proper airflow and carbon filtration.

3. Drying

- 3.1 The wet buds on stalks are hung to dry.
- 3.2 The drying process is monitored on a daily basis until the wet bud reaches around 14% moisture.
- 3.3 Once the buds have reached 14% and the larger stalks snap, its time remove the buds from the stalks.
- 3.4 The dried buds are then placed into air-tight containers, placed in the curing room and burped over the course of around 2 weeks.
- 3.5 Infested, damaged, moldy or otherwise unusable product obtained from the drying process will be destroyed.

4. Production of Cannabis Oil

- 4.1 Solvents are not used in the oil production process.
- 4.2 The Medical Cannabis oil undergoes analytical laboratory testing for potency and purity.

5. Processing, Packaging and Labelling

- 5.1 Processing and packaging will be done immediately after drying to reduce exposure to contaminants.
- 5.2 The processing area must be at the same temperature and humidity as the drying room to ensure that moisture isn't introduced.

6. Storage

- 6.1 Once the product is packaged in air-tight sealed containers it will be labelled with the lot number, dated and stored in the designated area in the facility.
- 6.2 Storage of the product is such that the integrity is not compromised, and security measures are adequate.

7. Shipping

- 7.1 Upon the receipt of an order, the product will be picked by first-in-first-out (FIFO) basis.
- 7.2 The container will be affixed with the product label, client label or a combined label.
- 7.3 Appropriate forms will be completed (**Refer to Standard Operating Procedure on Recordkeeping/Documentation Handling**)

LIST OF ABBREVIATIONS

QA	Quality Assurance
AR	Authorised Representative
SOP	Standard Operating Procedure
QM	Quality Management
SAHPRA	South African Health Products Regulatory Authority
GSP	Good Storage Practice
GAP	Good Agricultural Practice
QMS	Quality Management System

1. OBJECTIVE

To ensure that the premises design is designed in such a way to allow for optimal flow of product and staff

2. SCOPE

The scope of this SOP is to comply with the requirements of design to take into account the construction of each room or structure for performing different activities with Medical Cannabis to prevent contamination and optimize the flow of personnel and materials.

3. RESPONSIBILITY:

Authorised Representative (AR).
Facility Manager (FM).
Heads of Departments (HOD).

4. POLICY:

It will be the responsibility of the Authorised Representative (AR) to make sure that shipping areas are separate from the storage areas. The facility will have segregated areas for retains, waste materials and other areas designated as required by SAHPRA. The SOP - Premises & Environmental Controls details the methods and procedures which permits the production and non-production areas to be orderly with consideration given to design, temperature and humidity monitoring, workflow, and maintenance.

5. PROCEDURE:

1. Medical Cannabis Products will be stored and processed appropriately by maintaining appropriate space to carry out the operations of the facility, and the separation of production and non-production areas.
2. The building is designed in such a way that it allows adequate space for the optimal flow of materials and staff.
3. The processing areas and the shipping/receiving area are separate from the storage areas.
4. Non-production areas are physically separated from the production areas, such that each activity with Medical cannabis is conducted in separate rooms with inter-locked doors and Biometric fingerprint access.
5. This is to prevent contamination, mix-ups and optimize the flow of personnel and materials.
6. Washrooms, offices and entrances are separate from, and not directly entered from, production and processing areas.
7. The ILCO Farming (PTY) Ltd facility has segregated areas for retains and other areas designated as required.
8. The Medical waste Cannabis is stored prior to destruction within the designated and labelled waste material area of the facility.
9. The Medical waste Cannabis is destroyed with third-party A-Thermal as per Standard Operating Procedure-Refer to **SOP-3-INV-005 (Procedure for Destruction of Medical Cannabis products)**.
10. The facility has a controlled environment that is continually monitored for temperature and humidity controls using a calibrated thermometer.
