STANDARD OPERATING PROCEDURE

PROCEDURE FOR INCIDENT OR DEVIATION CONTROL

Page 1 of 6

SOP No:	4-FPH-002	Effective Date:	2020-05-10
Revision No:	2	Supersedes:	1
Revise By:	2022-05-10		

LIST OF ABBREVIATIONS

SAHPRA	South African Health Products Regulatory Authority
AR	Authorised Representative
SOP	Standard Operating Procedure
FM	Facility Manager

1. OBJECTIVE:

This SOP describes the process for dealing with an incident or deviation at ILCO Farming (Pty) Ltd.

2. SCOPE:

This SOP shall be implemented by all employees and contractors dealing with an incident or deviation at ILCO Farming (Pty) Ltd.

3. RESPONSIBILITY:

AR	Authorised Representative
FM	Facility Manager

4. POLICY:

The AR shall be informed of any incident or deviation as it is witnessed or occurs. An Incident/Deviation Report shall be completed recording the details of actions required and for traceability purposes.

5. PROCEDURE:

5.1 The person witnessing an incident or initiating a deviation shall contact the AR immediately to notify him of the issue.

5.2 Together they shall initiate an Incident/Deviation Report. Refer to Attachment 6.3

5.3 The AR will record the unique Incident/Deviation number on the form and enter the date the issue

occurred as well as the name and job title of the person discovering the incident/deviation.

5.4 The following information must be documented for each incident/deviation:

- 5.4.1 The type of incident/deviation. This is based on issues or changes in any of the following such as: documentation; SOP; equipment; area; process; personnel; product; environmental conditions.
- 5.4.2 Description of the incident/deviation - what happened, how did it happen, why did it happen? Use root cause analysis processes to conclude this section.
- 5.4.3 Complete the impact of the incident/deviation with specific details – indicate the affected: documentation; SOP; equipment; area; process; personnel; product; environmental conditions. Record 'not applicable' where there is no associated impact.
- 5.4.4 Record the proposed corrective action for this issue on the form.
- 5.4.5 Record the proposed preventative action, where required, on the form.

5.5 The AR will advise regarding the need to initiate a CAPA and record this decision on the form.

- 5.5.1 CAPA actions may be as follows: retraining of staff or contractors; updating of master documentation for the product or process under review amongst others.

The SOP: 4-FPH-003 Procedure for CAPA, shall be followed where required.

5.6 The AR will record a conclusion on the form and sign and date it. The timeline for conclusion of the report is suggested to be within 5 days.

5.7 All records will be retained for the document retention period required by ILCO Farming (Pty) Ltd. This includes hard and soft copies.

LIST OF ABBREVIATIONS

GMP	Good Manufacturing Practice
GSP	Good Storage Practice
AR	Authorised Representative
SOP	Standard Operating Procedure
QRM	Quality Risk Management
GAP	Good Agricultural Practice
RPN	Risk Priority Number
CFT	Cross Functional Team
FMECA	Failure Mode, Effects and Criticality Analysis
ICH	International Conference on Harmonization

1. OBJECTIVE:

The purpose of this SOP is to provide a systematic approach for quality risk management (QRM). It specifically provides details on the principals and tools to be used by ILCO Farming (Pty) Ltd. to enable effective and consistent risk-based decisions regarding the quality of the medicinal cannabis product across the product life cycle.

2. SCOPE:

This SOP shall be implemented by all employees and contractors when engaging in the cultivation, processing and storage of medicinal cannabis to and from ILCO Farming (Pty) Ltd.

3. RESPONSIBILITY:

AR	Authorised Representative
SM	Senior Management

4. POLICY:

ILCO Farming (Pty) Ltd. will comply with GSP, GAP and aspects of GMP applied to processing medicinal cannabis, including risk management and validation, throughout the product's life cycle and provide good assurance that risks are largely controlled.

STANDARD OPERATING PROCEDURE			
PROCEDURE FOR QUALITY RISK MANAGEMENT			Page 2 of 10
SOP No:	4-FPH-004	Effective Date:	2020-05-18
Revision No:	2	Supersedes:	1
Revise By:	2022-05-18		

A pro-active assessment of risk will include the following areas: security; facilities; equipment; environmental control; operational activities; change management; supply chain; transport; waste management; supplier oversight; self-inspections. This will aim to control risk the life cycle of the product. The level of effort, formality, and documentation of the QRM process depends on the level of risk.

QRM is part of ILCO Farming's strategic management to methodically address the risks attached to its activities. The focus of effective risk management is the identification and treatment of these risks. QRM is an ongoing, cyclical, and continuous process. Risk Management ensures the high quality of a cultivated product to the patient by providing proactive means to identify and control potential quality issues during cultivation and processing. The QRM process will specify a timeline, deliverables and appropriate level of decision making for the elements included in the quality risk management process.

5. PROCEDURE:

- 5.1 The QRM process is a working process. An annual risk assessment must be conducted in accordance with GAP, GSP and Cultivation SOPs and starts with pro-active risk assessments performed before the activities commence.
- 5.2 The AR will form a cross-functional team (CFT) of subject matter experts from departments involved across the life cycle of the product.
 - 5.2.1 The CTF will follow the QRM Process as per the elements included in the Failure Modes, Effects and Criticality Analysis (FMECA) model. This is based on the ICH Q9 guidance. Refer to Attachment 6.3
 - 5.2.2 The AR will identify the CFT Leader and specify the timelines to prepare and finalise QRM entries in the QRM Register.
 - 5.2.3 The CFT Leader will take responsibility for coordinating QRM across various functions of their organization.
 - 5.2.4 The AR will assure that a QRM process is defined, deployed and reviewed and that adequate resources are available.
- 5.3 Risk is defined as the combination of the probability of occurrence of harm and the severity of that harm. The detectability of identifying this harm is then factored into the assessment to generate a Risk Priority Number (RPN).
- 5.4 The following questions must be addressed by the CFT in each area under review:
 - What might go wrong?
 - What is the likelihood (probability) it will go wrong?
 - What are the consequences (the severity)?

STANDARD OPERATING PROCEDURE

PROCEDURE FOR QUALITY RISK MANAGEMENT

Page 3 of 10

SOP No:	4-FPH-004	Effective Date:	2020-05-18
Revision No:	2	Supersedes:	1
Revise By:	2022-05-18		

- How easy is it to detect them?

Potential risks in relation to the following must be considered and classified accordingly:

Materials and ingredients; physical characteristics and composition of the product; processing procedures; microbial limits where applicable; premises; equipment, packaging; sanitation and hygiene; personnel (human error), utilities and supply chain.

During the risk assessment corrective and preventative action must be taken to ensure risks are reduced or eliminated. If any incident occurs or any hazard is identified it must be logged and reported as per SOP on the QRM Register and investigated to review it's RPN.

5.5 The steps that are taken by the AR include:

- 5.5.1 Convene the first CFT meeting to discuss the QRM process.
- 5.5.2 Assemble background information and/or data on the potential hazard, harm or human health impact relevant to the risk assessment.
- 5.5.3 Specify a timeline, the deliverables, and an appropriate level of decision-making for the risk management process.
- 5.5.4 Internal SOPs will define steps that must be followed, the stakeholders, their roles and management responsibilities.

5.6 Risk Assessment

- 5.6.1 **Risk Identification** is a systematic use of information to identify hazards referred to the question or problem description. Refer to historical data, theoretical analysis, informed opinions, and the concerns of stakeholders. Risk identification addresses the "What might go wrong?" question, including identifying the possible consequences.
- 5.6.2 **Risk Analysis** is the estimation of the risk associated with the identified hazards. It is the qualitative or quantitative process of linking the likelihood of occurrence and severity of harm. The ability to detect the harm (Detectability) also factors in the estimation of risk.
- 5.6.3 **Risk Evaluation** compares the identified and analyzed risk against given risk criteria. Compile an RPM = Occurrence X Severity X Detectability. The CFT Leader will capture this information into the QRM Register - refer to Attachment 6.4
- 5.6.4 The QRM Register will be assigned a unique number e.g. QRM001/2020. Each entry will be assigned a unique risk number e.g. QRM/XXX/001 where XXX denotes the department or system, such as DRY for Drying room or WAT for

Revision No:	2	Supersedes:	1
Revise By:	2022-05-18		

water system. 001 will be the first entry of multiple sequential numbers across all entries.

- 5.6.5 ILCO Farming (Pty) Ltd. will apply a risk assessment scale of 1 - 5 to each element with of 1 being lowest risk and 5 being highest risk.
Refer to the table for qualifying risk:

Value	(S) Severity of event (Consequence)
5	High (H): Can cause serious adverse health consequences which can threaten the life of Patient or even death.
3-4	Medium (M): Temporary or reversible adverse health consequences but the life of the patient is not threatened.
1-2	Low (L): No effect/Impact for patients

Value	(P) Probability estimation (Likelihood of event occurring)
5	High (H): Once in 6 months.
3-4	Medium (M): Once in a year - Periodic.
1-2	Low (L): Less than once in a year - Seldom

Value	(D) Level of detectability
1	High (H): The risk can be easily detected immediately through deployed control measures / system and detection system in automated.
2-3	Medium (M): the risk can be detected latter through operational measures / system and the detection is through manual method.
4-5	Low (L): The risk cannot be detected through operational control measures / system and the detection is possible after longer period / interval.

5.7 Risk Control

Risk control includes decision making to reduce and/or accept risk. The purpose to risk is to reduce the risk to an acceptable level.

5.7.1 The CFT will focus on the following questions:

- Is the risk above an acceptable level?
- What can be done to reduce or eliminate risks?
- What is the appropriate balance among benefits, risks and resources?
- Are new risks introduced as a result of the identified risk being controlled?

Revision No:	2	Supersedes:	1
Revise By:	2022-05-18		

5.7.2 **Risk acceptance** is a decision to accept risk. It can be formal decision to accept the residual risk or it can be a passive decision. For some types of harm, even the best QRM practices might not entirely eliminate risk. The CFT will agree that an appropriate QRM strategy has been applied and that quality is reduced to a specified (acceptable) level.

5.8 **Risk communication** is the output/result of the quality risk management process. It will be appropriately communicated and documented by the CFT and discussed with the senior management.

5.9 **Risk Review** is an ongoing part of the quality management process. ILCO Farming will perform a QRM review every quarter and update the QRM Register for those entries that are reviewed. New entries will be added where new hazards or harm has occurred in the previous quarter.

LIST OF ABBREVIATIONS

OOS	Out of Specification
AR	Authorised Representative
SOP	Standard Operating Procedure
THDL	Temperature and Humidity Data Logger

1. OBJECTIVE:

This SOP describes the process for dealing with temperature and humidity deviations at ILCO Farming (Pty) Ltd.

2. SCOPE:

This SOP shall be implemented by all employees and contractors when managing temperature and humidity deviations at ILCO Farming (Pty) Ltd.

3. RESPONSIBILITY:

AR	Authorised Representative
FM	Facility Manager
DAR	Deputy Authorised Representative

4. POLICY:

The temperature at the facility where medicines are stored must be above 15 °C and below 25 °C. The temperature and humidity in the facility is monitored every 15 minutes with an electronic device such as LogTag and data is downloaded every 7 days. The temperature for the processing area is an online and live monitoring system, and the alert is sent to the AR via SMS and email when the temperature and humidity deviation occurs. Deviations shall be actioned by the AR. Deviations shall be recorded, investigated, and corrective action implemented.

5. PROCEDURE:

5.1 Investigation will happen in the facility when temperature and humidity is out of specification.

- 5.2 When a deviation occurs the THDL devices will record the information.
- 5.3 When such occurs the employee responsible for the THDL will notify the AR or DAR.
- 5.4 If the deviation happens in the processing area the AR or DAR will receive an SMS and email immediately, notifying of the OOS.
- 5.5 The deviation will then be actioned by the AR.
- 5.6 The AR will then complete the Temperature and Humidity Deviations form. Refer to attachment 6.3
- 5.7 The following details will be captured:
- A unique number will be assigned to each deviation, such as THD00x, where x is an incremental number
 - Record the THDL number
 - Record date of deviation
 - The name of person identifying the deviation
 - Details of deviation
 - Identify the cause following an investigation
 - Describe corrective action
 - Describe preventative action
 - Sign off by AR and FM or DAR
- 5.8 The AR will implement the corrective action taken and monitor this to ensure that it has prevented the issue from occurring again, where possible.

LIST OF ABBREVIATIONS

DAR	Deputy Authorised Representative
AR	Authorised Representative
SOP	Standard Operating Procedure
DAFF	Department of Agriculture, Forestry and Fisheries

1. OBJECTIVE:

This procedure details the policy regarding confirmation of validation of clients/customers to ensure compliance in terms of the provisions of the Medicines and Related Substances Act, 101 of 1965, Section 22C and 22D to be read in conjunction with Regulation 23 and 24 of the Act. ILCO Farming (Pty) Ltd supplies medicinal cannabis products to export customers as per their offtake agreement.

2. SCOPE:

This SOP covers the system for checking the validity of clients for medicinal cannabis supply in international countries, according to their health authority rules and regulations.

3. RESPONSIBILITY:

AR	Authorised Representative
DAR	Deputy Authorised Representative

4. POLICY:

Medicinal cannabis shall only be sold / supplied to licensed entities as per the offtake agreement. An up to date list of approved valid clients will be maintained by the AR.

STANDARD OPERATING PROCEDURE

PROCEDURE FOR CHANGE CONTROL

Page 1 of 7

SOP No:	4-FPH-007	Effective Date:	2020-05-21
Revision No:	2	Supersedes:	1
Revise By:	2022-05-21		

LIST OF ABBREVIATIONS

GSP	Good Storage Practice
AR	Authorised Representative
SAHPRA	South African Health Products Regulatory Authority
SOP	Standard Operating Procedure

1. OBJECTIVE:

This SOP describes the process for dealing with change control at ILCO Farming (Pty) Ltd.

2. SCOPE:

This SOP shall be implemented by all employees and contractors when engaging in change control at ILCO Farming (Pty) Ltd.

3. RESPONSIBILITY:

AR	Authorised Representative
M	Management

4. POLICY:

Any changes to specified written procedures or master documentation will follow the procedure for change control. Personnel must be re-trained before implementation of such a change. The AR as well as supervisory personnel will be involved in managing the change control process. Any changes to facilities, utilities and equipment will follow this change control procedure. The documents shall be updated according to SOP: 1-DOC-001 Creation and Updating of SOPs and SOP: 1-DOC-003 Procedure for Document Control. All documents shall be under the control of the AR or designee.

5. PROCEDURE:

5.1 To initiate a change a formal request on the change control request form will be prepared by the relevant personnel. Refer to attachment 6.3.

5.2 The reasons and justification for the change will be clearly documented.

SOP No:	4-FPH-007	Effective Date:	2020-05-21
Revision No:	2	Supersedes:	1
Revise By:	2022-05-21		

- 5.3 The change control request form will be handed to the AR for analysis.
- 5.4 The decision taken by the AR is the final decision and no other person can override this decision.
- 5.5 Once the change control request has been approved the initiator or person implementing the change must implement an action plan.
- 5.6 They will compile data in the Change Control Report Form. Refer to attachment 6.4
- 5.7 The titles and numbers of documentation, equipment, processes or systems that require a change will be recorded on this form.
- 5.8 Every change control report form will be given a unique number.
- 5.9 The current version/revision of each document will be superseded and the amendment history section will be updated to include the new version/revision number with a short summary of the changes made.
- 5.10 The AR will sign off this form once all activities have been completed.
- 5.11 The relevant personnel will be trained within two weeks, on the new requirements. However, if it is a critical change, no further related activities will take place until the personnel have been trained.
- 5.12 All documentation for change control will be retained and archived for a minimum of five years or for the data retention time period approved by ILCO Farming (Pty) Ltd.

LIST OF ABBREVIATIONS

GHP	Good Housekeeping Practice
GAP	Good Agricultural Practice
AR	Authorised Representative
SOP	Standard Operating Procedure

1. OBJECTIVE:

This SOP describes the process for Good Housekeeping at ILCO Farming (Pty) Ltd.

2. SCOPE:

This SOP is a mandatory document and shall be implemented by all employees and contractors when engaging in all aspects of housekeeping at ILCO Farming (Pty) Ltd.

3. RESPONSIBILITY:

AR	Authorised Representative
FM	Facility Manager
C	Cleaners

4. POLICY:

Management is ultimately responsible to ensure that Good Housekeeping is abided by. Good Housekeeping forms an important part of the working procedures and this decision must be conveyed to all employees. The following shall be adhered to, all areas shall be kept clean, doors shall be closed on vacating the premises. Walls shall be cleaned, and surfaces kept free of unnecessary items. No foodstuffs shall be allowed in the Facility, only in the designated eating areas for this purpose. The AR of ILCO Farming (Pty) Ltd shall perform regular inspection audits to monitor compliance.

STANDARD OPERATING PROCEDURE			
PROCEDURE FOR GOOD HOUSEKEEPING			Page 2 of 8
SOP No:	4-FPH-008	Effective Date:	2020-05-20
Revision No:	2	Supersedes:	1
Revise By:	2022-05-20		

5.1 The external appearance of the facility must be properly maintained to inspire confidence in the nature of the health care service that is being provided and portray a professional image.

5.2 Entrances, doorways, and passages (between storage shelves) must be kept clear and wide enough to allow entrance for pallet trolleys.

5.3 The AR on duty must ensure that no therapeutic goods are taken from the restricted area without his/her permission.

5.4 All areas will be cleaned on an on-going basis, and the cleaner will complete the Cleaning log indicating the following:

- Date
- Area
- Rubbish removed
- Dustbins Emptied
- Dusted
- Swept/Vacuumed
- Mopped/Washed
- Name of cleaner

5.5 Floors in packing area are to be swept twice daily.

5.6 All other floors are to be swept daily.

5.7 All floors are to be washed daily using water based liquid cleaner and detergent blend containing no hazardous components as cleaning agent.

5.8 Floors must be kept uncluttered and clean.

5.9 Should spillage occur, cleaning must take place immediately.

5.10 Dusting of all surfaces must be done daily.

5.11 The hand-washing facilities must always have hot water readily available, as well as an adequate supply of soap, nailbrush and clean towels (or other satisfactory means of drying the hands).

5.12 Moveable waste material bins on wheels must be clearly marked "Waste Material".

5.13 Bins allocated for pharmaceutical waste in case of spillage must be clearly indicated.

5.14 All used packaging material, boxes, plastic etc., must be removed from the facility and packed in the designated area near the gate.

5.15 No contaminants must be left in the premises overnight.

5.16 The following steps below must be followed when dusting, sweeping/vacuuming and mopping, this will ensure that the work is done faster and more effective:

5.2 Dusting:

5.2.1 Dust high surfaces first and work downward. Start at one end of the room and move in a clockwise or anti-clockwise direction.

STANDARD OPERATING PROCEDURE

PROCEDURE FOR GOOD HOUSEKEEPING

Page 3 of 8

SOP No:	4-FPH-008	Effective Date:	2020-05-20
Revision No:	2	Supersedes:	1
Revise By:	2022-05-20		

- 5.2.2 Move objects (phones, paper weights, pictures, etc.) and dust under them.
- 5.2.3 However, work papers should not be moved.
- 5.2.4 Dust around any papers left on desks or tables.
- 5.2.5 Papers in a pile can be moved slightly so you can dust under and around them unless you are instructed not to disturb any paperwork.
- 5.2.6 Do not carelessly flick your dust cloth, static duster, or extension duster as you dust. This will spread the dust, but not capture it. Instead, wipe the surface.
- 5.2.7 Telephones should be wiped daily with a damp cloth. Telephone handsets should be cleaned with a disinfectant on a weekly basis.
- 5.2.8 Spray disinfectant on a rag and wipe the handset and cradle only. Never, spray cleaner directly on to the phone.
- 5.2.9 Once a week dust and/or clean the following: light switches, doors, handrails, spot clean walls and smudges on interior glass.
- 5.2.10 Chairs should be dusted from top to bottom. Start by dusting any trim on top, then the sides and work your way down to the bottom legs. Material chairs should be wiped down with a wet cloth.
- 5.2.11 When dusting blinds, first dust across the top. Then close the blinds and dust the entire surface.
- 5.2.12 Close blinds to the other side and dust the newly exposed surface area.
- 5.2.13 In hallways and corridors make sure to dust fire doors, fire extinguishers, exit signs, show cases, bars on exit doors, door frames, and any other horizontal surfaces.
- 5.2.14 Make sure to dust any areas where dust can accumulate, such as clocks, picture frames, cabinet tops and sides, the sides of desks, partitions, air vents, lights, baseboards, and windowsills.
- 5.2.15 Use a backpack vacuum to clean hard to reach areas and upholstered furniture.

5.3 Sweeping/vacuuming:

- 5.3.1 Floor cleaning is carried out in two steps. First sweeping/vacuuming and then mopping.
- 5.3.2 Clear the area, of all obstacles before you start sweeping/vacuuming.
- 5.3.3 Start sweeping/vacuuming from one wall to another or from door to door so you can seal the room off to traffic until the floors dry. Never start sweeping in the middle of a room (floor).
- 5.3.4 not sweep the entire floor before discarding of the dust.
- 5.3.5 Collect small amounts of dust and discard this into a dustbin.
- 5.3.6 Corner off the area before you start sweeping/vacuuming.

Revise By:	2022-05-20		

5.4 Mopping:

- 5.4.1 After the floors have been completely swept or vacuumed.
- 5.4.2 Fill a bucket with your cleaning solution and clean, warm water. Follow instructions. If you are using a cleaner to wash away dirt and grime, be sure to mix the product with the right amount of water.
- 5.4.3 Dip your mop in the water and wring it out.
- 5.4.4 Mop your floor, being sure to rinse your mop frequently.
- 5.4.5 Make sure the area is still cordoned off before you start mopping.
- 5.4.6 Every time the water in the bucket gets dirty, change the water, and continue with the floor cleaning.
- 5.4.7 Work your way from one wall to another or from door to door so you can seal the room off to traffic until the floors dry. Never start mopping in the middle of a room (floor).
- 5.4.8 When you have mopped every section, thoroughly rinse your mop, and mop bucket and allow drying completely.
- 5.4.9 Clean your mop's bucket. Wet buckets can be rife with germs and, if you leave them damp, may start to smell (which means the next time you use your mop, it will smell, too). Rinse your bucket with a mixture of water and vinegar after every use.
- 5.4.10 Store the mop upside down so excess water can drain from the mop's top.

5.5 Surfaces to be wiped with a wet cloth:

- 5.5.1 Shelves once a week.
- 5.5.2 Telephones once a week.
- 5.5.3 Tables once a week.
- 5.5.4 Light switches once a week.
- 5.5.5 Doors once a week.
- 5.5.6 Handrails, daily as this can spread germs from one person to another.
- 5.5.7 Walls once a month.
- 5.5.8 Windows once a month.
- 5.5.9 Mirrors, when cleaning the bathroom/toilet daily.

Note: All equipment used i.e. mops, brooms and cloths must be cleaned and washed after use.
