

Where your cultivation requests stand

We split your big list into three phases. Two are done & live; the third is the large one, which we'll build room-by-room with you.

✓ DONE & LIVE

1 · Task flood

The board isn't drowning you anymore.

✓ DONE & LIVE

2 · Inventory / stock

The paper logs are now in the app.

NEXT — THE BIG ONE

3 · Room-by-room

Every room its own paperwork, linked by batch #.

PHASE 1 — THE TASK FLOOD IS GONE

✓ Done

"Ons gaan forever click" — **fixed**. The Temp & Humidity checklist was making **one task per tray, per day** — nearly **1,000** on your board. One reading covers the **room**, not each tray, so it's now **one per room**. Your T&H list went from ~995 down to **6**.

✓ Done

Old backlog cleared. The pile of overdue tray tasks is off your board (kept in the records for the audit trail, not deleted).

✓ Done

"**Checklist**" menu **removed** — the checklists are moving *into each room* (Phase 3). Nothing was lost; they're still on your Tasks board in the meantime.

CHICKEN FARM — WHILE WE WERE IN THERE

✓ Done

Catching now subtracts from the hok. You spotted it: "*ons is besig om hoenders te vang, ek sien dit trek nie van die hokke af nie.*" Now **birds left = placed – dead – caught**, per coop. Example live now — **Coop 4: 2,300 – 117 dead – 1,800 caught = 383 left**. Each coop card shows a **caught** figure so you can see it working.

PHASE 2 — INVENTORY / STOCK (REPLACES THE PAPER)

Everything you photographed is now a live screen under a new **Inventory** menu.

✓ Done

All your products loaded (21): the 11 chemicals (Biodyne, Spliff, Pyrol, Diatomaceous Earth, Bittermag, Agrisil, Rooting Gel, Vectobac, Cerasulfur, Neudosan, HOCL), plus substrate, consumables and hygiene. They start at **0** — you enter the real opening stock with a **Stock in**.

✓ Done

The balance works itself out. Every Stock in / Stock out updates the balance automatically — no more adding up columns by hand (that was where the paper went wrong).

✓ Done

Chemical register — batch number + expiry per batch received, with **expiry alerts** and **low-stock alerts** on their own tab.

✓ Done

No wet signatures. Name & Sign are the logged-in person + a full audit trail. Corrections ask for a reason and are logged (date, time, who, before & after).

PHASE 3 — ROOM-BY-ROOM (NEXT, THE BIG ONE)

Your main idea: click a room → all its paperwork is **in that room**, and everything links together **from cloning to dispatch**, every record carrying the **batch number**. This is the largest piece, so we'll build the room shell + **two rooms first**, show you, then roll out the rest — rather than change everything at once.

To build it right, we need a few things from you:

1. **Scouting** and **Defoliation** logs — what columns/fields do you want on each? (They weren't on the paper you sent.)
2. **The rest of the product photos** for inventory — you said more were coming.

3. OK for a **chemical application in the Activity Log to auto-subtract** that chemical from stock? (We'd recommend yes — it closes the loop.)

On your phone: please **close the app fully and open it again** once, so it loads the newest version (the inventory menu + the chicken fix). If it still looks old, pull down to refresh.
