

We went through everything you sent — here's where each item stands

Thank you for the detailed feedback and screenshots. Nothing got lost.

DONE & LIVE NOW — EVERY ITEM YOU SENT

✓ Done	Clone count fixed. Deleting a tray to redo it now subtracts those clones from the mother — no more 237-instead-of-119.
✓ Done	Quieter board. A new tray no longer drops a task for <i>every</i> rooting day — one clone-room temp/humidity task per tray. Duplicate "build grow calendar" reminders cleared.
✓ Done	Everything in order. Clone trays now run T1 → T49 and mothers M1 → M29 in proper order — no more 2, 15, 25; no hunting for missed trays.
✓ Done	Record Harvest. A "Record harvest" button captures the actual wet weight (kg) per harvest (e.g. Elvis, SI) with the date — variance vs the estimate is worked out for you.
✓ Done	Edit the Environmental & Activity logs. You can now correct any entry — and every edit asks for a reason and is logged (date, time, who, before & after), so the record stays audit-clean for GMP. Nothing is changed silently.
✓ Done	Chemical & Foliar — free entry. On the activity log you can now set your own time , the equipment # and the dose / rate (e.g. 5 ml/L) for sprays — no fixed slots.
✓ Done	More cleaning schedules. Added: PPE (mother & GH) , cultivation area , general area and irrigation — alongside greenhouse, mother bay and clone room.
✓ Done	Cleaning frequencies are tickable. Weekly / monthly / before- & after-batch rows now take your initials too — not just the daily tasks.

ONE CHANGE ON YOUR SIDE

The grow calendar / schedule is now built & edited by the **Head of Cultivation (Lou)** only — you can still see it, the edit controls sit with Lou. One owner for the cycle plan.

Everything else is unchanged — full add / edit / delete: clone-room oversight · daily checks · mortality · BayGrid · deviations routed to you · tasks · cleaning · environment logs · Chickens · Facility 360.
