

One change for you — and a quieter board

Small, clear, and nothing you use day-to-day is taken away.

The one change: the **grow calendar / schedule** is now built and edited by the **Head of Cultivation (Lou)** only. You can still **see** the calendar, but the create / edit / reschedule controls now sit with Lou — one owner for the cycle plan keeps it clean and avoids clashes.

EVERYTHING ELSE IS EXACTLY AS IT WAS — YOU KEEP FULL CONTROL

You can still add, edit and delete: clone-room oversight · daily checks · mortality · BayGrid (pots/strains) · deviations routed to you · tasks · cleaning schedules · environment logs · Chickens · Facility 360. Nothing here changed.

YOUR BOARD IS QUIETER NOW

- Each new clone tray no longer dumps a task for *every* rooting day — it's now **one clone-room temp/humidity task per tray**.
- The duplicate "build grow calendar" reminders are gone (they piled up during genesis).

So you'll see **your** work, not a wall of repeats.
