

Your QA work board & QMS — what's changed

We rebuilt the quality side around how you actually run QA. This is your GMP control system, in one place.

The big change: your work board now shows **your** quality work — not everyone else's daily checklists. Deviations to review and sign-offs come to you; the rest of the farm's tasks stay on their own boards.

1 YOUR WORK BOARD = YOUR QA QUEUE

When you open your board, you land on the **QA view**: every **deviation** (from any department) plus your **QA / Lab** work and **sign-offs**. The hundreds of daily cleaning & cultivation checklists other roles complete no longer clutter your screen — you see what needs *your* quality decision.

2 DEVIATIONS — RAISE, APPROVE, CLOSE

Deviations move across your board like cards:

A deviation can't be closed without a **CAPA** (corrective/preventive action) — quality is enforced, not optional.

3 YOUR QMS HUB — ALL LIVE

SOP register	Versioned SOPs + staff acknowledgement tracking
Deviations & CAPA	Raise, review, approve, close with corrective action
Equipment calibration	Calibration schedule + due dates
EU-GMP control registry	Every control mapped to its EU-GMP source
QMS records	Your quality records, in one auditable place

4 YOU CAN STILL SEE EVERYTHING

Oversight hasn't gone away — you can still view the **whole facility's** activity through the Oversight view. The difference is it's now a **separate** view you choose, not mixed into your daily to-do.
