

Full System Status — ILCO Cluster

Where the platform is · cannabis go-live · poultry · the rails you run on

To: **ILCO Agent Cluster**
From: FO (Floris, super admin)
Date: 2026-06-17
Rails health: **15/15**

Where we are. The FLOCORE rails ILCO runs on are live and verified (Sentinel 15/15 across KPIs, micro-models, SOPs, dashboards and smart chat). Cannabis go-live (18/06) is rail-ready; the poultry dashboard is in build. This is the full picture for the cluster.

1 · ILCO cannabis — go-live 18/06 (rail-ready)

Capability	Endpoint	State
Custody / chain-of-custody (hash-chained, dual sign-off)	/custody/attest · /status · /ledger	LIVE
CFS — Current Facility State baseline (real stock)	basis=cfs + effective_date	LIVE
CFS compliance indicator	/cfs/indicator	LIVE
Grow-cycle start — registered-mother → clone gate + genealogy	/growos/batch/start	LIVE
SOP lifecycle — draft → dual sign-off → live (durable)	/sops/draft · /sops/author	LIVE
Role-grounded dashboards + smart chat (facts instant)	/micro-models/role-insights · role-chat	LIVE
Training loop (competency dual sign-off → SOP green)	/training/competency/*	LIVE
Auto-raise tickets (expiry / KPI / training / custody)	/sentinels/auto-raise	LIVE
14 grow-cycle SOP drafts (grounded + law-cited)	handoffs/ilco_sops/	READY

Go-live sequence (18/06): register real mothers as CFS baseline → dual sign-off (incl QA) → **registered** → clone via */growos/batch/start* (gate blocks unregistered) → **HOC / cultivation admin builds the grow calendar on the tenant side (GrowOS)** → verify via */growos/batches* + */audit/events*. Author the clone SOP green before the run.

2 · ILCO poultry — Loraine's chicken farm (in build)

Stand up Loraine's **poultry** role + dashboard as a **customer under ILCO** on the same role-activation engine (role → KPIs → SOPs → dashboard), grounded to **DALRRD / biosecurity / animal-welfare** (not SAHPRA). Confirm poultry type (broiler / layer / breeder) for the KPI set. Ilse (owner) gets owner-level **view** access. Separate silo from the cannabis customer.

3 · Ownership — who owns what (no blur)

FLOCORE (rails)

- Custody, audit, CFS, the registered-mother gate
- SOP lifecycle + compliance grounding
- Role automation, tickets, verification

Tenant (ILCO / GrowOS)

- **The grow calendar** — HOC / cultivation admin
- VPD / environment process (Lou / GrowOS)
- Genetics: verify mothers, take clones

4 · Platform rails (the wider system you sit on)

Rail	State
IoT bridge + lysimeter crop steering (dryback · runoff EC/pH → next-feed balance)	LIVE
Verification Sentinel — browser-free API flight-plan runner	LIVE (15/15)
Distillation orchestration (per-role micro-models, effectiveness-gated)	GATE LIVE · GPU off-box
Design tokens (chameleon, per-tenant brand)	LIVE
Centralized identity / OTP brands · service-token gateway	OTP LIVE · gateway WIP
Ontology + declarative workflow engine (ADR-001)	ENGINE IN · projection scoped

5 · What's next for the cluster

- Execute the **18/06 cannabis go-live** sequence; author SOPs just-in-time per stage.
- Build the **poultry dashboard** (confirm poultry type → KPI set).
- Drive real role **signal** (observations) so micro-models distil — effectiveness is the gate.
- Run the **Sentinel flight plan** as the go-live / health check (it stays green = healthy).

Comms: route everything through Floris (super admin). Do not brief owners, clients or operators directly — Floris controls all stakeholder contact. Report results back to FO.
