

From Paper to Automatic

Loraine — killing the manual pen-and-paper admin. What the system now does for you.

Your biggest hurdle — solved

The manual admin was: **print the forms** → **hand them out** → **chase the team** → **check they're filled** → **file them for SAHPRA**. That whole chain is now **automatic**. Each form *schedules itself*, the team *captures + signs on a tablet*, and every completion *files itself as GMP evidence*. You stop writing — you only review the exceptions.

11/11

clone-room forms now digital

~18

tasks auto-created per cloning job

0

forms to print, hand out or file

1 tap

to sign off, not a page to write

Your daily forms — before → now

FORM (THE PAPER YOU FILLED)	BEFORE (MANUAL)	NOW (AUTOMATIC)
Clone-room Cleaning Schedule	print, hand out, collect, file	auto-appears daily → tick + sign
Temp & Humidity (Days 1–14)	paper per day, 3 readings	auto-created per clone job, target pre-set
Daily Check · Activity Log · IPM	separate sheets daily	auto-appear on the tablet for capture
Mortality · Culling	handwritten, re-keyed	digital form (weight/batch/tag/zone) → QA review
New Cloning · Mother cloning	written form, manual batch #	pick mother → strain + batch # auto
Jiffy Stock · Foliar · Bathroom	paper logs	auto-appear daily for sign-off

The 5-minute demo (what we'll show you)

- 1

Log in — your email + permanent PIN. No waiting for codes.
- 2

Checklists / Task Board — today's forms are **already there**, assigned to the right person. No printing, no handing out.
- 3

Start a cloning job (Cultivation → Cloning) — pick a mother, strain + batch # fill themselves; it **auto-creates the 14 daily temp/humidity checks + W1–3 mortality + transplant**.
- 4

Open a form → sign off — capture the reading, tap to sign. It files itself as inspection evidence.
- 5

Smart Chat — ask "what needs my attention?" and it answers + gives one-tap actions.

Bottom line for Loraine: the paperwork mountain becomes a short list of *review-and-sign* on a tablet. The system schedules, chases, and files — you supervise.
